Hiring Manager
Multiview Inc.
Irving, TX, USA

Re: Data Analyst Vacancy

Dear Hiring Manager:

I am excited to apply for the position of Data Analyst at Multiview Inc. advertised on the company's Careers Page. After having familiarized myself with the company through some research, I have become an ardent admirer of how the company works towards achieving goals of delivering customer service across the globe using data and creativity. Moreover, the youthful, friendly and upbeat work environment at the company fascinates me. I am confident that my education in Computer Science with the specialization in Data Science, as well as my work experience and enthusiasm for data analysis will help me excel in the role of Data Analyst at Multiview Inc.

My professional experience has given me insights into this field. I bring over 2 years of industry experience working at Infosys Ltd. I underwent thorough training in core computer science technologies and emerged as a top performer. I participated in various software development lifecycles and this gave me immense experience and groomed me to become a professional. I believe that working at Multiview Inc. will give me great experience in the field of data science and broaden my horizons. After working as a data analyst, I wish to become a data scientist solving more complex problems.

At the University of Texas at Arlington, I completed several projects related to the task at hand. A significant portion of my work included the exploration of data, finding patterns and drawing conclusions. Currently, I am pursuing the Udacity's Data Analyst Nanodegree (74% completed) to sharpen my skills and get valuable knowledge from industry experts. I am working on the exploratory data analysis project analyzing a huge dataset using statistical packages such as R Studio in order to design predictive models.

I have also implemented a challenging project of building an Android application which required learning from scratch the technology in just under two months. It was the most challenging task that I have completed so far. It involved discussions with my teammates and brainstorming the features. This project shows that I am a fast learner.

I am a passionate data analyst fascinated by the opportunities created by the abundance of available data and computing power in the modern digital marketing industry. I spend time explaining how important data-driven results are and strive to validate my hypotheses using statistical testing. I plan my work by breaking it down into chunks and creating milestones to achieve. I do not hesitate to ask questions to validate assumptions and clarify requirements.

I am very interested in this position and grateful for this opportunity at Multiview Inc. I have included my resume for your review and would highly appreciate an interview opportunity. The best way to reach me is by phone or email.

Thank you for your time and consideration and I look forward to hearing from you.

Yours sincerely,
Sargam Shah
